# SAFETY INSTRUCTIONS

## GENERAL GUIDELINES

1. It is advised to insert an isolation transformer in the AC supply before servicing a hot chassis.
2. Potentials as high as 33KV are present when this receiver is in operation. Operation of the receiver without the rear cover involves the danger of a shock hazard from the receiver power supply. Servicing should not be attempted by any one who is not competent with the precautions necessary when working on the high voltage equipment. Always discharge the anode of the tube.
3. When servicing observe the original lead dress in the high voltage circuits. If a short circuit is found, replace all the parts which have been overheated or damaged by the short circuit.
4. Always use the manufacturer's replacement safety components. The critical safety components marked with **⚠** on the schematics diagrams should not be replaced by other substitutes. Other substitute may create the electrical shock, fire or other hazards. Take attention to replace the spacers with the originals. Furthermore where a short circuit has occurred, replace those components that indicate evidence of overheating.
5. After servicing, see that all the protective devices such as insulation barriers, insulation papers, shields and isolation R-C combinations are correctly installed.
6. When the receiver is not being used for a long time of period of time, unplug the power cord from the AC outlet.
7. After servicing make the following leakage current checks to prevent the customer from being exposed to shock hazard.

## LEAKAGE CURRENT COLD CHECK

1. Unplug the AC cord and connect a jumper between the two prongs of the plug.
2. Turn the receiver's power switch on.
3. Measure the resistance value with an ohmmeter, between the jumpered AC plug and each exposed metallic cabinet part on the receiver, such as screw heads, aerials,

connectors, control shafts etc. When the exposed metallic part a return path to the chassis the reading should be between 4Mohm and the 20Mohm. When the exposed metal does not have a return path to the chassis, the reading must be infinite.

## LEAKAGE CURRENT HOT CHECK

1. Plug the AC cord directly in to the AC outlet. Do not use an isolation transformer for this check.
2. Connect a 2Kohm 10W resistor in series with an exposed metallic part on the receiver and an earth, such as a water pipe.
3. Use an AC voltmeter with high impedance to measure the potential across the resistor.
4. Check each exposed metallic part and check the voltage at the each point.
5. Reverse the AC plug at the outlet and repeat each of the above measurements.
6. The potential at the any point should not exceed 1.4 Vrms. In case a measurement is outside the limits specified, there is the possibility of a shock hazard, and the receiver should be repaired and rechecked before it is returned to the customer.

## X-RAY RADIATION WARNING

The primary source of X-ray radiation in this receiver is the picture tube. The chassis is specially constructed to limit X-ray radiation. For continued X-ray radiation protection, replace the tube with the same type of the original one.

## CAUTION

**AFTER REMOVAL OF THE ANODE CAP, DISCHARGE THE ANODE OF THE PICTURE TUBE AND THE ANODE CAP TO THE METAL CHASSIS, CRT SHIELD, OR THE CARBON PAINTED ON THE CRT WITH A HIGH VOLTAGE PROBE AND MULTIMETER (SELECT VDC) AND THEN SHORT CIRCUIT DIRECTLY TO DISCHARGE COMPLETELY.**

## 1. ELECTRICAL ADJUSTMENTS

### 1.1 Supply Voltage Adjustment

Connect a digital voltmeter to the cathode of diode D607 at the AV mode of the TV and set the screen voltage to the minimum with the screen potentiometer. Adjust the main supply voltage (B+) with P601 potentiometer to the following value (after supply adjustment, readjust Screen and focus voltage).

14"	: 105 VDC (for A33EKC01X01)
20"	: 118 VDC (for A48EJW011X21)
21"	: 110 VDC (for A51EFS83X191)

## 2. SERVICE ADJUSTMENTS

To enter the Service Mode, 'Service In/Out" button on the Service Remote Control or activate the "Picture Menu" with the user remote control and press "9301" (Press "0" button to exit the Service Mode).

"Red" , "Green" , "Yellow" and "Blue" Teletext buttons are for Feature Setup, Geometry, White Balance and IF menus respectively.

### 2.1 IF Adjustments

#### 2.1.1 PAL SECAM BG/DK/I

- Supply a 471.25 MHz BG system colour bar RF signal to the set by a pattern generator and find this signal in "setup" menu (C21).
- In order to deactivate AFT loop, shift value of "fine tuning" from central point by one unit and then shiftback to the central point again (2 small vertical lines are seen in scale on central point). Store the channel by selecting "Store" and pressing "OK" button.
- Switch on the Service Menu and press "Blue" teletext button.
- Check that value of "PVC38" is "07". Adjust the coil LC101 until the the "OK" is seen.
- Press "OK" button on the Remote Control.
- Exit from the service menu.

Note: "PVF38" is for fine tuning. However, it is automatically applied when "OK" button is pressed at "PVC38" item. Thus any manual adjustment is not required.

#### 2.1.2 SECAM L/L'

- Supply a 55.75 MHz, L' system colour bar RF signal to the set by a pattern generator and find this signal in "setup" menu (C02).
- In order to deactivate AFT loop, shift value of "fine tuning" from central point by one unit and then shiftback to the central point again (2 small vertical lines are seen in the scale on central point). Store the channel by selecting "Store" and pressing "OK" button.
- Enter Service Mode and press "Blue" Teletext button. Select "PVC33" item of the service menu.
- Press "OK" button on the Remote Control.
- Exit from the service menu.

### 2.2 AGC Adjustment

- Apply a signal with amplitude  $70 \pm 1$  dBuV to the antenna input of TV with a pattern generator (switch sound carrier to Off and switch "Video Ext" to On).
- Switch on the Service Menu and press "Red" teletext button.
- Find the "AGC" with P+ / P- buttons.
- Measure the amplitude of 38.9 MHz sinusoidal signal on pin 11 (IF2) of Tuner with an oscilloscope.
- Change "AGC" to get  $640 \pm 20$  mVpp.
- Add 5 to "AGC" value and change "2.AGC" to this value.
- Exit from the service menu.

## 2.3 Screen Adjustment

- Switch on the Service Menu and press "Yellow" teletext button.
- Find item "SCRN" in the menu. Apply color bar pattern
- For 14" sets: Adjust the Screen potentiometre until the voltage across the pin of R727 (that is connected CRT cathode) and ground is  $139 \pm 3$  VDC.
- For 20"-21" sets: Adjust the Screen potentiometre until the voltage across the pin of R727 (that is connected CRT cathode) and ground is  $164 \pm 3$  VDC (For 20"Ekranas CPT, adjustment value is  $154 \pm 3$  VDC )
- Exit from the service menu

## 2.4 White Balance Adjustment

- Apply a white pattern with a pattern generator to the antenna input.
- Enter the Service Menu and and press "Yellow" teletext button.
- Select "B.DRV" option with P+ / P- buttons and change its value to "32" with V+ / V- button.
- Adjust "R.DRV" and "G.DRV" for white balance.
- Adjust "R.CUT" and "G. CUT" for red and green cut off (There is no blue cut off adjustment).
- If white balance can not be adjusted properly change "B.DRV" value.
- Exit from Service menu.

## 2.5 Geometry Adjustments

- Apply the cross hatch pattern with a pattern generator to the antenna input.
- Enter Service Menu and press "Green" teletext button.
- Adjust Vertical Amplitude with "V.4:3" option.
- Add 18 to "V.4:3" value and change "V.16:9" to this value.
- Adjust vertical position with "V.POS", vertical linearity with "LNRTY", horizontal position with "H.POS".
- Subtract 14 from "V.4:3" value and change "V1. 60" to this value.
- Add 4 to "V.4:3" value and change "V2. 60" to this value.
- Set "VP.60" to the same value of "V.POS".
- Set "LN.60" to the same value of "LNRTY" .
- OSD window position can be centered on the screen with "OSD.H" and "OSD.V".
- Exit from the Service Menu.

Note that: There is no horizontal width adjustment in this chassis. It can be adjusted by changing power supply voltage in the interval of -1 and +1 V.

## 2.6 Feature Setup

Enter the Service Menu with the Service RC and and press "Red" and "Blue" teletext button. Check that below features match with the set.

TUNER	: Phillips, Sharp&Alps, Panasonic, Temic
ST.BY	: YES (Automatic switch off is active, default value), NO (can be used during repair)
AV2	: YES (Front AV is available), NO
CLR.S	: PAL, PAL/NTSC3.5 (+NTSC Playback), PAL/SECAM, PAL/SECAM/NTSC3.5 (NTSC Pback)
SND.S	: BG, I, BG+DK, BG+LL'
QSS/I	: INTERCARRIER (default value) , QSS
TEXT	: NON TEXT, DEFAULT (Teletext), FASTTEXT
LANG	: A (West Europe), B (East Europe)
HOTEL	: NORMAL TV, HOTEL TV
RGBIN	: YES (When Scart RGB exists, aerial isn't showed-for only for some Hotel TVs), NO (Default)
APR	: ON (Auto RGB level control is available, default value) , OFF
B.STR	: ON (Black level control is available), OFF (default value)
ATS	: YES (Automatic tuning system is on), NO Note : ATS must be NO for non-teletext sets. For Hotel TV's, ATS can not selectes YES.
AVL	: YES (Automatic Volume Limiter is on, default value), NO
ZPG	: YES (Timer Programmed channel switching function is on), NO
ZAPP	: YES (One button channel switching function is on), NO It is selected YES for Hotel TV.

**4-KEY** : NO (3-button version), YES (4-button version) - Note: after SW version SC1120-05.  
**GAME** : YES (Tetris game available), NO - Note : available in Software Version SC1120-G1  
**BBACK** : YES (Blueback available), NO - Note : available in Software Version SC1120-G1

## 2.7 Hotel Mode

If "Hotel" option in the Service Menu is selected as "HOTEL TV", the setup menu is get by entering "4658" in the "Features Menu". The setup menu includes the following items:

1. HOTEL MODE : On/off selection and end of TV channels (start is "00")
2. RADIO MODE : On/off selection and start of Radio channels (end is "99").
3. MAX VOLUME : Maximum allowed volume level
4. RESET ADJ. : Sound and picture preset values that will be applied after reset operation
5. MESSAGE : Welcome Message can be edited (max. 148 character long)
6. INFO SCREEN : Information Message can be edited (3 pages, each 500 character long)  
Customer gets these pages by pressing "INFO" button of Remote Control
7. LOAD DATA : Loads data from the Smart loader to a TV
8. SAVE DATA : Save data from master TV to the Smart Loader
