JUMO DICON 400/500
Universal process controllers

Brief description

This series of universal, freely configurable process controllers is available in the formats 96 mm x 96 mm and 96 mm x 48 mm (portrait and landscape format).

The instruments feature two 4-digit 7-segment displays, five or eight LEDs for indication of the switching status and operating modes, an 8-digit matrix display, as well as six keys for operation and configuration.

The user has flexibility in assigning the slots of the controller according to the block structure. Additional functions include self-optimisation, parameter set switching, and up to eight limit comparators.

Linearisations for conventional transducers are held in the memory; a customized linearisation table can be programmed.

The process controller can be adapted to a variety of tasks with the aid of a maths module.

The instruments can be integrated into a data network via a serial interface, or can be expanded through an external relay module.

A setup program is available for easy configuration from a PC.

The electrical connection is at the rear by screw terminals.

Analogue input 3

Analogue input 4

Slots

Supply
110—240 V AC or
20—30 V AC/DC

Logic inputs 1+2
for floating contacts

Logic inputs 3+4
for floating contacts

Logic inputs 5+6
for floating contacts

Logic inputs 7+8
for floating contacts

Serial interface
RS422/485

PROFIBUS DP

External relay module ER8

Output 1

Output 2

Output 3

Output 4

Output 5

Output 6

Outputs:
- Relay
- Solid-state relay
- Logic output 5V
- Logic output 22V
- Analogue output
- Supply for 2-wire transmitter

Standard version
Type 703570 only

Analogue inputs:
- Resistance thermometer
- Thermocouples
- Standard signals
- Potentiometer

Features

- Switchable displays

- Text or bar graph display

- 8 limit comparators

- 4 setpoints

- 2 parameter sets

- Maths and logic module

- Ramp and profile program function

- Setup program with JUMO start-up software for Windows® 95/98/NT4.0/2000/XP

Approvals/marks of conformity (see Technical data)

ABS TYPE APPROVAL PROGRAM   BV   DIN Geprüft   DNV   GL   Lloyd's Register   RINA 86   c UL US

Self-optimisation

The standard specification includes an auto-tuning facility which permits the user to adjust the controller to the process without any control engineering know-how.

Auto-tuning evaluates the reaction of the process to certain changes of the output variables. The controller parameters Xp, Tn, Tv and Cy are calculated.

Ramp function

This function enables a defined approach of the process value from t_0 to the current setpoint.

The slope is adjusted via a gradient (°C/min, °C/h or °C/day) at configuration level 1.

On a setpoint change, it is active either as a rising or a falling ramp.
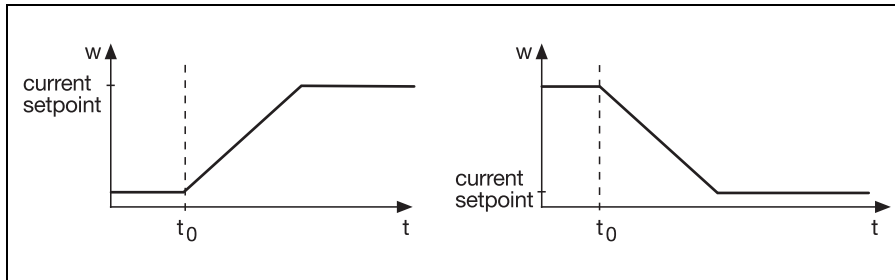

Profile program function

It is possible to produce a profile program with up to eight segments. The segment setpoints (W_SEG01 — W_SEG08) and segment times (T_SEG01 — T_SEG08) are defined at an additional level. The segment times can be programmed from 00:00:00 to 99:59:59 (format: hh:mm:ss).

The program starts at the program start or the process value. When starting at the process value, the profile is searched to find a setpoint which corresponds to the process value at the instant of the start. The profile then continues from this point. If the process value is outside the profile, a start is made at the first program segment. The program can either be run through once, or it can be repeated cyclically. Furthermore, it is possible to hold the program.
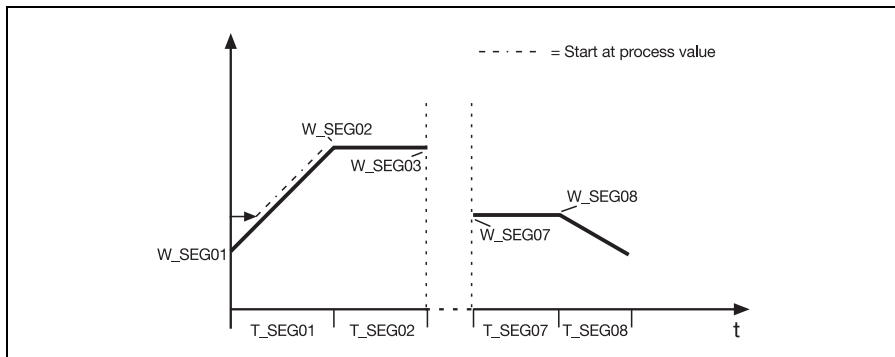

Fuzzy logic

In addition to the standard parameters, the controller software also contains a fuzzy logic software module. This can be used to improve both the control and the disturbance action via two parameters.

Customized linearisation

As well as the linearisations for conventional transducers, a customer-specific linearisation can be created.

Programming is performed via the setup program, in the form of a table of values.

Maths and logic module (option)

The maths module can be used to integrate, for instance, setpoints, outputs and the measured values of the analogue inputs into a mathematical formula.

Through the logic module it is possible to logically link logic inputs and limit comparators, for example.

Two formulae can be entered via the setup program for each of the two modules. The results of the calculations can then be produced via the outputs or can be used for internal purposes.

There is the additional possibility of implementing controls for difference, ratio and humidity through standard formulae.

2009-01-29/00367438

Configurable displays

Any process variable can be visualised on the 7-segment displays and the dot-matrix display.

It is possible to switch between two displays either from the keys, or automatically after an adjustable interval.

Text display

The functions of the logic inputs, the limit comparators and the logic outputs of the logic module can have customer texts assigned to them.

Depending on the status of the function or the configuration of the displays, a programmed text (8 characters max.) is shown on the matrix display.

The customer texts can only be created using the setup program.

Setup program (accessory)

The setup program for configuration is available in English, German and French. A PC can be used to create and edit data sets, transfer them to the controller or read them out of the instrument. The data sets are stored and managed.
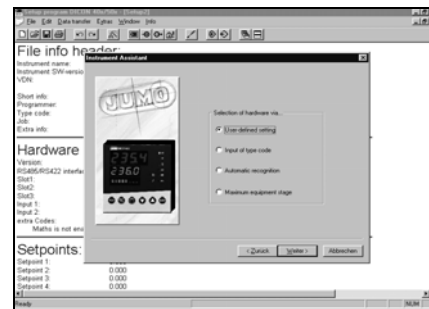

JUMO Start-up software

The JUMO start-up software is an integral part of the setup program and is available for conveniently adapting the controller to the process.

Different process variables (e. g. setpoint, process value, control deviation, signals from the controller outputs) can be displayed graphically. The controller parameters can be altered and transferred to the controller via the setup or RS422/485 interfaces.
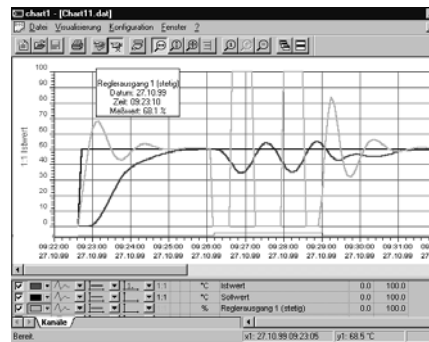

RS422/RS485 interface (option)

The serial interface is available for communication with higher-level systems. MODbus/Jbus are used as transmission protocols.

PROFIBUS-DP (option)

The controller can be integrated into a fieldbus system to the PROFIBUS-DP standard, via the PROFIBUS-DP interface. This PROFIBUS variant has been designed specifically for the communication between automation systems and decentralised peripheral instruments at the field level, and is speed-optimised.

The data are transmitted serially in accordance with the RS485 standard.

Using the project design tool included in the delivery (GSD-generator; GSD = instrument master data), a standardised GSD file is created that serves to integrate the controller into the fieldbus system, through selection of characteristic controller data.

External relay module ER8 (accessory)

The controller can be expanded by eight relay outputs through the external relay module ER8.

Operation is by the RS422/RS485 interface.

The setup program is necessary for configuring the ER8, which can be mounted on a standard DIN rail.

Functions of the logic inputs

– Start/cancel self-optimisation
– Changeover to manual mode
– Manual mode inhibit
– Ramp stop
– Ramp off
– Setpoint switching
– Process value switching
– Parameter set switching
– Key/level inhibit
– Text display
– All displays off
– Profile program start/stop

Functions of the outputs

– Analogue input variables
– Mathematics
– Process value
– Setpoint
– Control deviation
– Output
– Controller outputs
– Limit comparators
– Logic inputs
– Logic
– Manual mode signal

Operation, parameterization, configuration

Operation, setting of the controller parameters and configuration are arranged at different levels.

Operating level
Setpoints, measurements of the analogue inputs, maths as well as the controller output can be indicated here.

Profile program function
The eight segments of the profile program function are programmed here.
This level only appears when the profile program function has been activated.

Parameter level
The controller parameters are set here.

Configuration level 1
Here the basic functions of the instrument, such as controller function and setpoint switching, are set.

Configuration level 2
The hardware and software codes that correspond to the controller version, are shown here.

Basic status → Profile program function → Operating level → Parameter level → Configuration level 1 → Configuration level 2
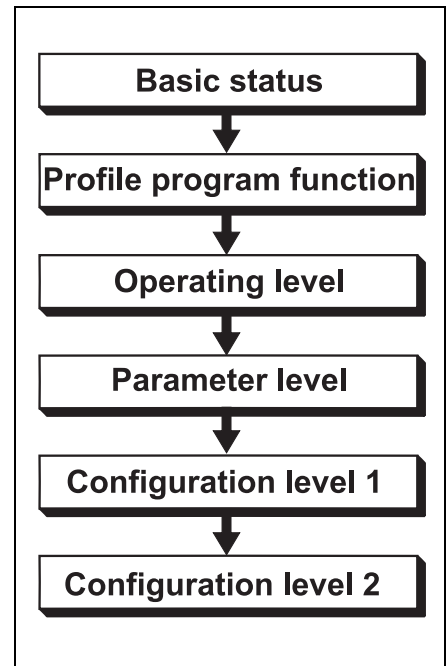

Displays and controls

(1)	configurable 7-segment display 4 digits, red		(4)	Setup interface (for position, see dimensional drawings)
	Type	Height		
	703570	13mm		
	703575	10mm		
	factory-set: process value			

(2)	configurable 7-segment display 4 digits, green		(5)	Status indication 6 (3) yellow LEDs for status indication of the outputs 2 green LEDs to display manual mode and the ramp/profile program function
	Type	Height		
	703570	10mm		
	703575	7mm		
	factory-set: setpoint			

(3)	configurable dot-matrix display 8 digits, green factory-set: output (bar graph)	(6)	Keys

Parameter level

The table below lists all the parameters, as well as their meaning. Depending on the controller type, certain parameters are irrelevant or not applicable. Two parameter sets can be stored for specific applications.

Parameters	Display	Value range	factory-set	Meaning
Controller structure	Structure 1	P, I, PD, PI, PID	PID	Structure 2 refers to the second output in the case of a double-setpoint controller
	Structure 2	P, I, PD, PI, PID	PID	
Proportional band	Xp1	0—9999 digit	0 digit	Size of the proportional band At Xp =0 the controller structure is not effective!
	Xp2	0 — 9999 digit	0 digit	
Derivative time	Tv1	0—9999 sec	80 sec	Influences the differential component of the controller output signal
	Tv2	0—9999 sec	80 sec	
Reset time	Tn1	0—9999 sec	350 sec	Influences the integral component of the controller output signal
	Tn2	0—9999 sec	350 sec	
Switching cycle time	Cy1	0—9999 sec	20 sec	For a switching output, the cycle time should be selected so that the energy supply to the process is virtually continuous while the switching devices are not overloaded.
	Cy2	0—9999 sec	20 sec	
Contact spacing	Xsh	0—9999 sec	0 digit	Spacing between the two control contacts for double-setpoint controllers, modulating controllers and proportional controllers with integral actuator driver.
Switching differential	Xd1	0—999 digit	1 digit	Differential of switching controllers for Xp = 0.
	Xd2	0—999 digit	1 digit	
Stroke time	TT	5—3000 sec	60 sec	Utilised stroke time of the control valve on modulating controllers and proportional controllers with integral actuator driver.
Working point	Y0	-100 to +100%	0%	Output on P and PD controllers (y = Y0 at x = w).
Output limiting	Y1	0—100%	100%	Maximum output limit
	Y2	-100 to +100 %	-100%	Minimum output limit
Minimum relay ON time	Tk1	0—60 sec	0 sec	Limitation of the switching rate on switching outputs
	Tk2	0—60 sec	0 sec	

Isolation
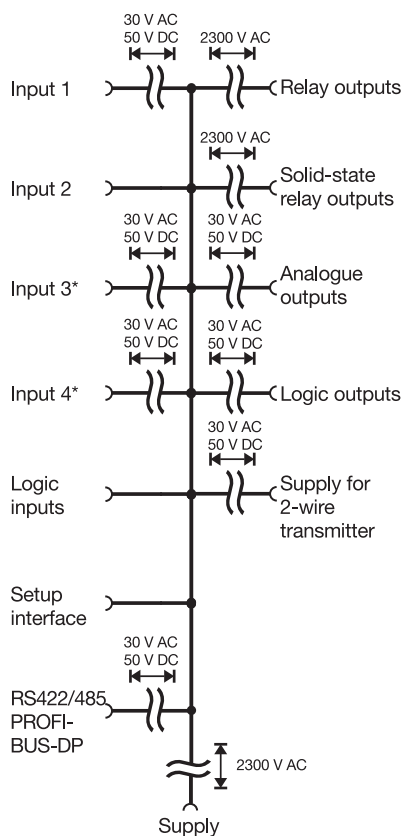

*Type 703570 only

1.	2.	3.	4.	5.	6.	Slot for output/two logic inputs (two logic inputs available as standard)
0	0	0	0	0	0	not assigned
1	1	1	1	1	1	Relay (changeover contact)
2	2	2	2	2	2	Solid-state relay 230V 1 A
3	3	3	3	3	3	Logic 0/5V
4	4	4	4	4	4	Logic 0/22V
5	5	5	5	5	5	Analogue output
6	6	6	6	6	6	Supply for 2-wire transmitter
7	7	7				Two logic inputs (logic inputs 3+4, 5+6, 7+8; only possible on slots 1, 2 and 3)

		Supply
2	3	110 — 240V AC -15/+10% 48 — 63Hz
2	5	20 — 30V AC/DC, 48 — 63Hz

		Interface
0	0	not assigned
5	4	RS422/RS485 with MODbus/Jbus protocol
6	4	PROFIBUS-DP

		Maths and logic module
0	0	not available
0	3	available

			Approvals
0	0	0	none
0	5	6	EN 14597*
0	6	2	Germanischer Lloyd (GL)*
