## 1. TEST STANDARDS AND REPORT VERSION

#### 1.1. Test Standards

The tests were performed according to following standards:

FCC Rules Part 15.225: Operation within the band 13.110-14.010 MHz.

ANSI C63.10-2013: American National Standard for Testing Unlicensed Wireless Devices.

### 1.2. Report version information

Report No : TRE1805021403 Page 5 of 14 Issued: 2018-06-12

# 3. **SUMMARY**

### 3.1. Client Information

| Applicant:    | Nexus ID Solutions AB  |
|---------------|--|
| Address:      | Telefonvägen 26,126 26 Hägersten Sweden  |
| Manufacturer: | CiVinTec Global Co., Limited   |
| Address:      | F17,1703,Headquarters Economic Center Buliding, Zhonghaixin Science&Technology Park, Bulan Rd, Shenzhen, China |

### 3.2. Product Description

|                      | ,                          |
|----------------------|----------------------------|
| Name of EUT:         | Access Control Door Reader |
| Trade Mark:          | -                          |
| Model No.:           | SC93110-MDEB-VG3           |
| Listed Model(s):     | -                          |
| Power supply*:       | DC 9V-30V                  |
| Adapter information: | -                          |
| RF Specification     |                            |
| Operation frequency: | 13.56MHz                   |
| Channel number:      | 1                          |
| Modulation Type:     | ASK                        |
| Antenna type:        | PCB antenna                |
| Antenna gain:        | 0dBi                       |

<sup>\*:</sup> prescan all test voltage, found worst case at DC 12V, so only show the test data of DC 12V.

Report No : TRE1805021403 Page 6 of 14 Issued: 2018-06-12

### 3.3. EUT operation mode

### **TEST MODE**

| For RF test items  |
|--|
| The engineering test program was provided and enabled to make EUT continuous transmit. |
| For AC power line conducted emissions:   |
| The EUT was set to connect with large package sizes transmission.                      |

## 3.4. EUT configuration

The following peripheral devices and interface cables were connected during the measurement:

- - supplied by the manufacturer
- supplied by the lab

| Manufacturer : | / |
|----------------|---|
| Model No. :    | / |
| Manufacturer : | / |
| Model No. :    | / |

Report No: TRE1805021403 Page 7 of 14 Issued: 2018-06-12

### 4. TEST ENVIRONMENT

#### 4.1. Address of the test laboratory

Laboratory: Shenzhen Huatongwei International Inspection Co., Ltd.

Address: 1/F, Bldg 3, Hongfa Hi-tech Industrial Park, Genyu Road, Tianliao, Gongming, Shenzhen, China

Phone: 86-755-26748019 Fax: 86-755-26748089

#### 4.2. Test Facility

The test facility is recognized, certified, or accredited by the following organizations:

CNAS-Lab Code: L1225

Shenzhen Huatongwei International Inspection Co., Ltd. has been assessed and proved to be in compliance with CNAS-CL01 Accreditation Criteria for Testing and Calibration Laboratories (identical to ISO/IEC17025: 2005 General Requirements) for the Competence of Testing and Calibration Laboratories.

#### A2LA-Lab Cert. No. 3902.01

Shenzhen Huatongwei International Inspection Co., Ltd. EMC Laboratory has been accredited by A2LA for technical competence in the field of electrical testing, and proved to be in compliance with ISO/IEC 17025: 2005 General Requirements for the Competence of Testing and Calibration Laboratories and any additional program requirements in the identified field of testing.

#### FCC-Registration No.: 762235

Shenzhen Huatongwei International Inspection Co., Ltd. EMC Laboratory has been registered and fully described in a report filed with the FCC (Federal Communications Commission). The acceptance letter from the FCC is maintained in our files. Registration 762235.

#### IC-Registration No.: 5377B-1

Two 3m Alternate Test Site of Shenzhen Huatongwei International Inspection Co., Ltd. has been registered by Certification and Engineering Bureau of Industry Canada for the performance of radiated measurements with Registration No. 5377B-1.

### ACA

Shenzhen Huatongwei International Inspection Co., Ltd. EMC Laboratory can also perform testing for the Australian C-Tick mark as a result of our A2LA accreditation.

Report No: TRE1805021403 Page 8 of 14 Issued: 2018-06-12

#### 4.3. Environmental conditions

During the measurement the environmental conditions were within the listed ranges:

| Temperature:       | 15~35°C     |
|--------------------|-------------|
| Relative Humidity: | 30~60 %     |
| Air Pressure:      | 950~1050mba |

#### 4.4. Statement of the measurement uncertainty

The data and results referenced in this document are true and accurate. The reader is cautioned that there may be errors in calibration limits of the equipment and facilities. The measurement uncertainty was calculated for all measurements listed in this test report according to TR-100028-01 "Electromagnetic compatibility and Radio spectrum Matters (ERM); Uncertainties in the measurement of mobile radio equipment characteristics; Part 1" and TR-100028-02 "Electromagnetic compatibility and Radio spectrum Matters (ERM); Uncertainties in the measurement of mobile radio equipment characteristics; Part 2" and is documented in the Shenzhen Huatongwei International Inspection Co., Ltd quality system according to ISO/IEC 17025. Further more, component and process variability of devices similar to that tested may result in additional deviation. The manufacturer has the sole responsibility of continued compliance of the device.

Here after the best measurement capability for Shenzhen Huatongwei is reported:

| Test Items                              | Measurement Uncertainty | Notes |
|---|-------------------------|-------|
| Conducted spurious emissions 9KHz-30MHz | 3.39 dB                 | (1)   |
| Radiated Emissions 30~1000MHz           | 4.24 dB                 | (1)   |
| Radiated Emissions 1~18GHz              | 5.16 dB                 | (1)   |
| Radiated Emissions 18-40GHz             | 5.54 dB                 | (1)   |
| Occupied Bandwidth                      |                         | (1)   |

<sup>(1)</sup> This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=1.96.

Report No : TRE1805021403 Page 9 of 14 Issued: 2018-06-12

### 4.5. Equipments Used during the Test

| Condu  | icted Emissions                |                    |              |             |                         |                         |

# 5. TEST CONDITIONS AND RESULTS

### 5.1. Antenna requirement

#### Requirement

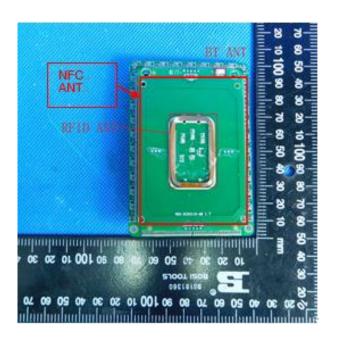

#### FCC CFR Title 47 Part 15 Subpart C Section 15.203:

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of anantenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

#### Refer to statement below for compliance.

The manufacturer may design the unit so that the user can replace a broken antenna, but the use of a standard antenna jack or electrical connector is prohibited. Further, this requirement does not apply to intentional radiators that must be professionally installed.

#### **TEST RESULTS**

#### 5.2. Radiated Emission

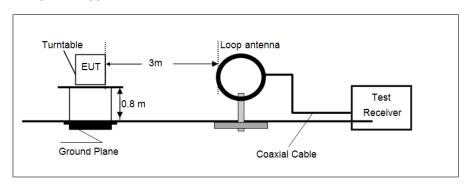

#### **LIMIT**

FCC CFR Title 47 Part 15 Subpart C Section 15.209

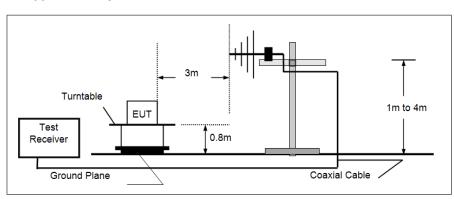

| Frequency     | Limit (dBuV/m @3m) | Value      |
|---------------|--------------------|------------|
| 30MHz~88MHz   | 40.00              | Quasi-peak |
| 88MHz~216MHz  | 43.50              | Quasi-peak |
| 216MHz~960MHz | 46.00              | Quasi-peak |
| 960MHz~1GHz   | 54.00              | Quasi-peak |
| Above 1GHz    | 54.00              | Average    |
| Above IGHZ    | 74.00              | Peak       |

#### TEST CONFIGURATION

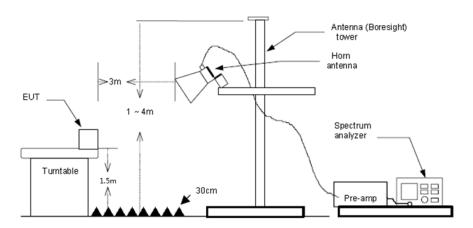

#### ● 9 kHz ~ 30 MHz

#### • 30 MHz ~ 1 GHz

#### Above 1 GHz

Report No: TRE1805021403 Page 12 of 14 Issued: 2018-06-12

#### **TEST PROCEDURE**

- 1. The EUT was setup and tested according to ANSI C63.10:2013 requirements.
- 2. The EUT is placed on a turn table which is 0.8 meter above ground for below 1 GHz, and 1.5 m for above 1 GHz. The turn table is rotated 360 degrees to determine the position of the maximum emission level.
- 3. The EUT was set 3 meters from the receiving antenna, which was mounted on the top of a variable height antenna tower.
- 4. For each suspected emission, the EUT was arranged to its worst case and then tune the Antenna tower (from 1 m to 4 m) and turntable (from 0 degree to 360 degrees) to find the maximum reading. A pre-amp and a high pass filter are used for the test in order to get better signal level to comply with the guidelines.
- 5. Set to the maximum power setting and enable the EUT transmit continuously.
- 6. Use the following spectrum analyzer settings
  - (1) Span shall wide enough to fully capture the emission being measured;
  - (2) Below 1 GHz: RBW=120 kHz, VBW=300 kHz, Sweep=auto, Detector function=peak, Trace=max hold;

If the emission level of the EUT measured by the peak detector is 3 dB lower than the applicable limit, the peak emission level will be reported. Otherwise, the emission measurement will be repeated using the quasi-peak detector and reported.

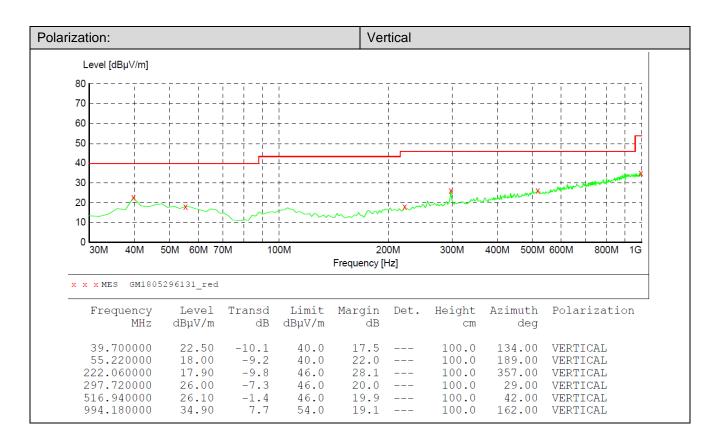

(3) From 1 GHz to 10<sup>th</sup> harmonic: RBW=1MHz, VBW=3MHz Peak detector for Peak value. RBW=1MHz, VBW=3MHz RMS detector for Average value.

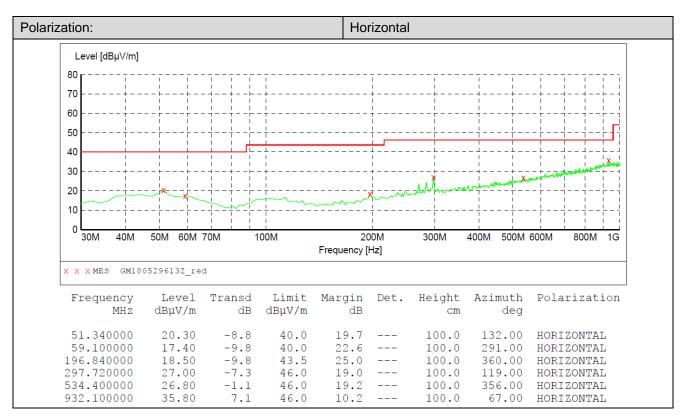

#### **TEST MODE:**

Please refer to the clause 3.3

| TECT | DECL | II TC |
