BMO 2005

1. Let  $ABC$  be a triangle whose inscribed circle touches  $AB$  and  $AC$  at  $D$  and  $E$ , respectively. Let  $X$  and  $Y$  be the points of intersection of the bisectors of the angles  $\angle ACB$  and  $\angle ABC$  with the line  $DE$  and let  $Z$  be the midpoint of  $BC$ . Prove that the triangle  $XYZ$  is equilateral if and only if  $A$  is  $60^\circ$ .
2. Find all primes  $p$  such that  $p^2 - p + 1$  is a perfect cube.
3. Let  $a, b, c$  be positive real numbers. Prove the inequality:

$$\frac{a^2}{b} + \frac{b^2}{c} + \frac{c^2}{a} \geq a + b + c + \frac{4(a-b)^2}{a+b+c}$$

When does the equality hold?

4. Let  $n \geq 2$  be integer. Let  $S$  be a subset of  $\{1, 2, \dots, n\}$  such that  $S$  neither contains two elements one of which divides the other nor contains two elements which are co-prime. What is the maximal number of elements of such a set  $S$ ?
